

3P-SERVICES

As a technology-oriented service provider, we care for a safe operation of pipelines worldwide. For this purpose we develop and manufacture “Intelligent Pigs” and at the same time handle the marketing, planning and execution of the services with these devices.

We work for the oil and gas, refining and the chemical industries. Our company is independent, rapidly expanding and currently has 100 employees.

JOB DESCRIPTION:

- › Technical and commercial processing of enquiries and tenders as well as consulting services and contract negotiations with the client.
- › Achieving relevant project objectives with respect to agreed scope, budget, schedule and quality.
- › Executing the project in line with client’s expectations, HSE rules, corporate guidelines, processes, policies, governance and the law.
- › Internal management of inspection projects in close cooperation with our project teams
- › Close out the projects through final project assessments and reporting. Subsequently drive Lessons-Learned process for service and process quality improvement cycle.
- › Identify and communicate potential and additional sales opportunities.
- › Manage invoicing and cash flow for each project.

YOUR QUALIFICATIONS:

- › Petroleum Engineering or similar qualifications. Fluent spoken and written English and French is required, other languages such as or Spanish aswell as firm knowledge and experience in pipeline technology would be an advantage.
- › We expect a structured and independent approach to the work as well as targeted and professional handling of new or complex tasks.

You are versatile, and looking for a diversified work environment and would like to advance your career in an aspiring company? Then we are looking forward to your application.
